

FOOD WASTEWATER AERATION

VaraCorp has provided aerators to a host of clients connected directly or indirectly to food processing operations. For example, our client list includes companies such as bakeries, fruit/vegetable processing operations, an apple cider vinegar production plant, fish packing plants, a prune packing plant, etc. VaraCorp also sells aerators to manufacturing clients which incorporate the aerators into their proprietary equipment which is sold to food processing companies.

The appeal of VaraCorp's aerator is not only its horsepower-to-efficiency ratio, but its flexibility to meet unusual or restricted installation conditions. Many food processing clients cannot use floating pontoons in their installations. The fact that VaraCorp's aerator can be dock or wall mounted using a mounting bracket supplied by VaraCorp is a plus for these companies.
